Re: Septech septic tanks

Dear Sir or Madam:

The Onsite Wastewater Products Review Committee has reviewed the specifications and test data for the above captioned product. The Committee has approved FRALO Septech septic tanks for use in Arkansas. These products will be added to the approved list.

All tanks sold in Arkansas must be supplied with the inlet and outlets precut to ensure a 3-inch offset and Schedule 40 sanitary "T" inlet and outlet baffles. The inlet baffle must extend six inches below the tank's liquid level and the outlet baffle must extend 40% of the liquid depth. A copy of your product's installation requirements must accompany the sale of each tank.

The manufacturer is required to provide a product description, guidelines for installation, and maintenance requirements to all local Health Units. The addresses of the local Health Units are available on the agency website, [www.healthyarkansas.com](http://www.healthyarkansas.com), or you can contact me for a printed list.

If you have any questions regarding this letter, you may contact me at the above number.

Sincerely,

Brad Jones  
Chairman, Onsite Wastewater Products Review Committee

Cc: Carl Graves, Secretary, Onsite Wastewater Products Review Committee
